Fever

Problem Code: **FEVER**

Submit (/START55D/submit-old/FEVER)

Chef is not feeling well today. He measured his body temperature using a thermometer and it came out to be X °F.

A person is said to have fever if his body temperature is **strictly greater** than 98 °F.

Determine if Chef has fever or not.

Input Format

- The first line contains a single integer T — the number of test cases. Then the test cases follow.
- The first and only line of each test case contains one integer X - the body temperature of Chef in °F.

Output Format

For each test case, output YES if Chef has fever. Otherwise, output NO.

You may print each character of YES and NO in uppercase or lowercase (for example, yes, yEs, Yes will be considered identical).

Constraints

- $1 \leq T \leq 10$
- $94 \leq X \leq 103$

Sample Input 1

```
3
98
100
96
```

Sample Output 1

```
NO
YES
NO
```

Explanation

Test Case 1: Since $X = 98$ is not greater than 98, Chef does not have fever.

Test Case 2: Since $X = 100$ is greater than 98, Chef has fever.

Test Case 3: Since $X = 96$ is not greater than 98, Chef does not have fever.
